Do you know Jackie Bangma started in my lab a few weeks ago? I mentioned I was sending this to you and I asked if she knew you and she started laughing and told me her history with you and Jessica Reiner (who used to be a pos-doc in our group).

I will get them in the mail today.

Mark

Mark,

Lam responded to me and it was somewhat lukewarm. I think maybe they will help but I think I still would like to have you send some standards, if you can. Thank you, look forward to them.

That would be awesome. We are retooling our method so its great timing. Thank you.

Say hi to Jackie for me

I can get them ready to send them next time I am in. Jackie started a few weeks ago. I saw her for the first time in person today since her start.

Wow, that is crazy. Here in Florida, we've been open for business for a while (though we have resisted the full opening).

I am not terribly optimistic about Chemours wanting to help us. I don't know how much work it would be to send small aliquots of those standards you have, but if you are willing to do that, that would be great. At the very least, we could set them up on our TQ for semi-quant and put them in our QE nontargeted workflow. But I totally understand if your hands are full at the moment.

Thank you for all your help/advice.

When does Jackie start?

Today was our first day allowed back. Still not mandatory. Just don't need any special permissions.

I think we have gotten between 15-20. I am not sure off hand.

The contact there is Lam Leung. I am not sure telling him I sent you will help or hurt. I have caused them some company grief recently.

Mark,

Thank you for the quick response. I'd be willing to reach out to Chemours, would you be willing to introduce me to your contact (or if not, give me the contacts info)? If that doesn't work, then maybe I might swing back to you with your standards.

How many Chemours compounds have you been able to get from them?

[External Email]

John It really depends on the analyte and the purpose for the analyte.

I can share most of the Chemours based analytes that are made up in water as an identification standard but they would not be good for quantitation.

Nafion BPs, and the poly and mono ethers. The second way is you could simply ask Chemours to give them to you. I have a contact and they are pretty responsive.

For the Solvay stuff it is way worse. The one analyte you may be able to get from Wellington is the compound C6O4 that Wellington calls P5MeODIOXOAc however I do know that Solvay claimed Wellington was given legal papers claiming patent infringement when they made this standrd. You may/may not be able to get it.
https://well-labs.com/docs/PFAS_29nov2019_WR.pdf

As far as the CI-PFECAs we published on recently there is no vendor and Solvay has not been willing to share them with us.

Subject: Standards

Mark,

Hope you are doing well.

Do you know how I can get my hands on some PFAS standards, ones that I've seen published but cannot be purchased (e.g., Solvay, Nafion byproducts, etc)?
